

Stark

Take control of your MHHS journey

Market-wide Half Hourly Settlement

The biggest and most fundamental change to the UK electricity market since 1996.

MHHS...have you heard?

Optional

Already have
HH

Doesn't
affect us

Need new
meters

It
won't happen

Delayed

Why MHHS

Bigger savings

Predicted savings of up to £4.5bn by 2045 for consumers who use Half Hourly data to enhance efficient consumption

More accurate settlement for better optimisation

It will transform how electricity is used and accounted for, with a faster, more accurate settlement process

Driver to Net Zero

New products & optimisation options will become available with HH data as the new standard. Plus, a smarter flexible grid can accommodate intermittent renewable energy generation

MHHS key dates

2024

MHHS agents progressing through qualification

October 2024 supplier contract rounds

2025

MHHS migration to new system begins from April 2025

Meters selected in groups to migrate

2026

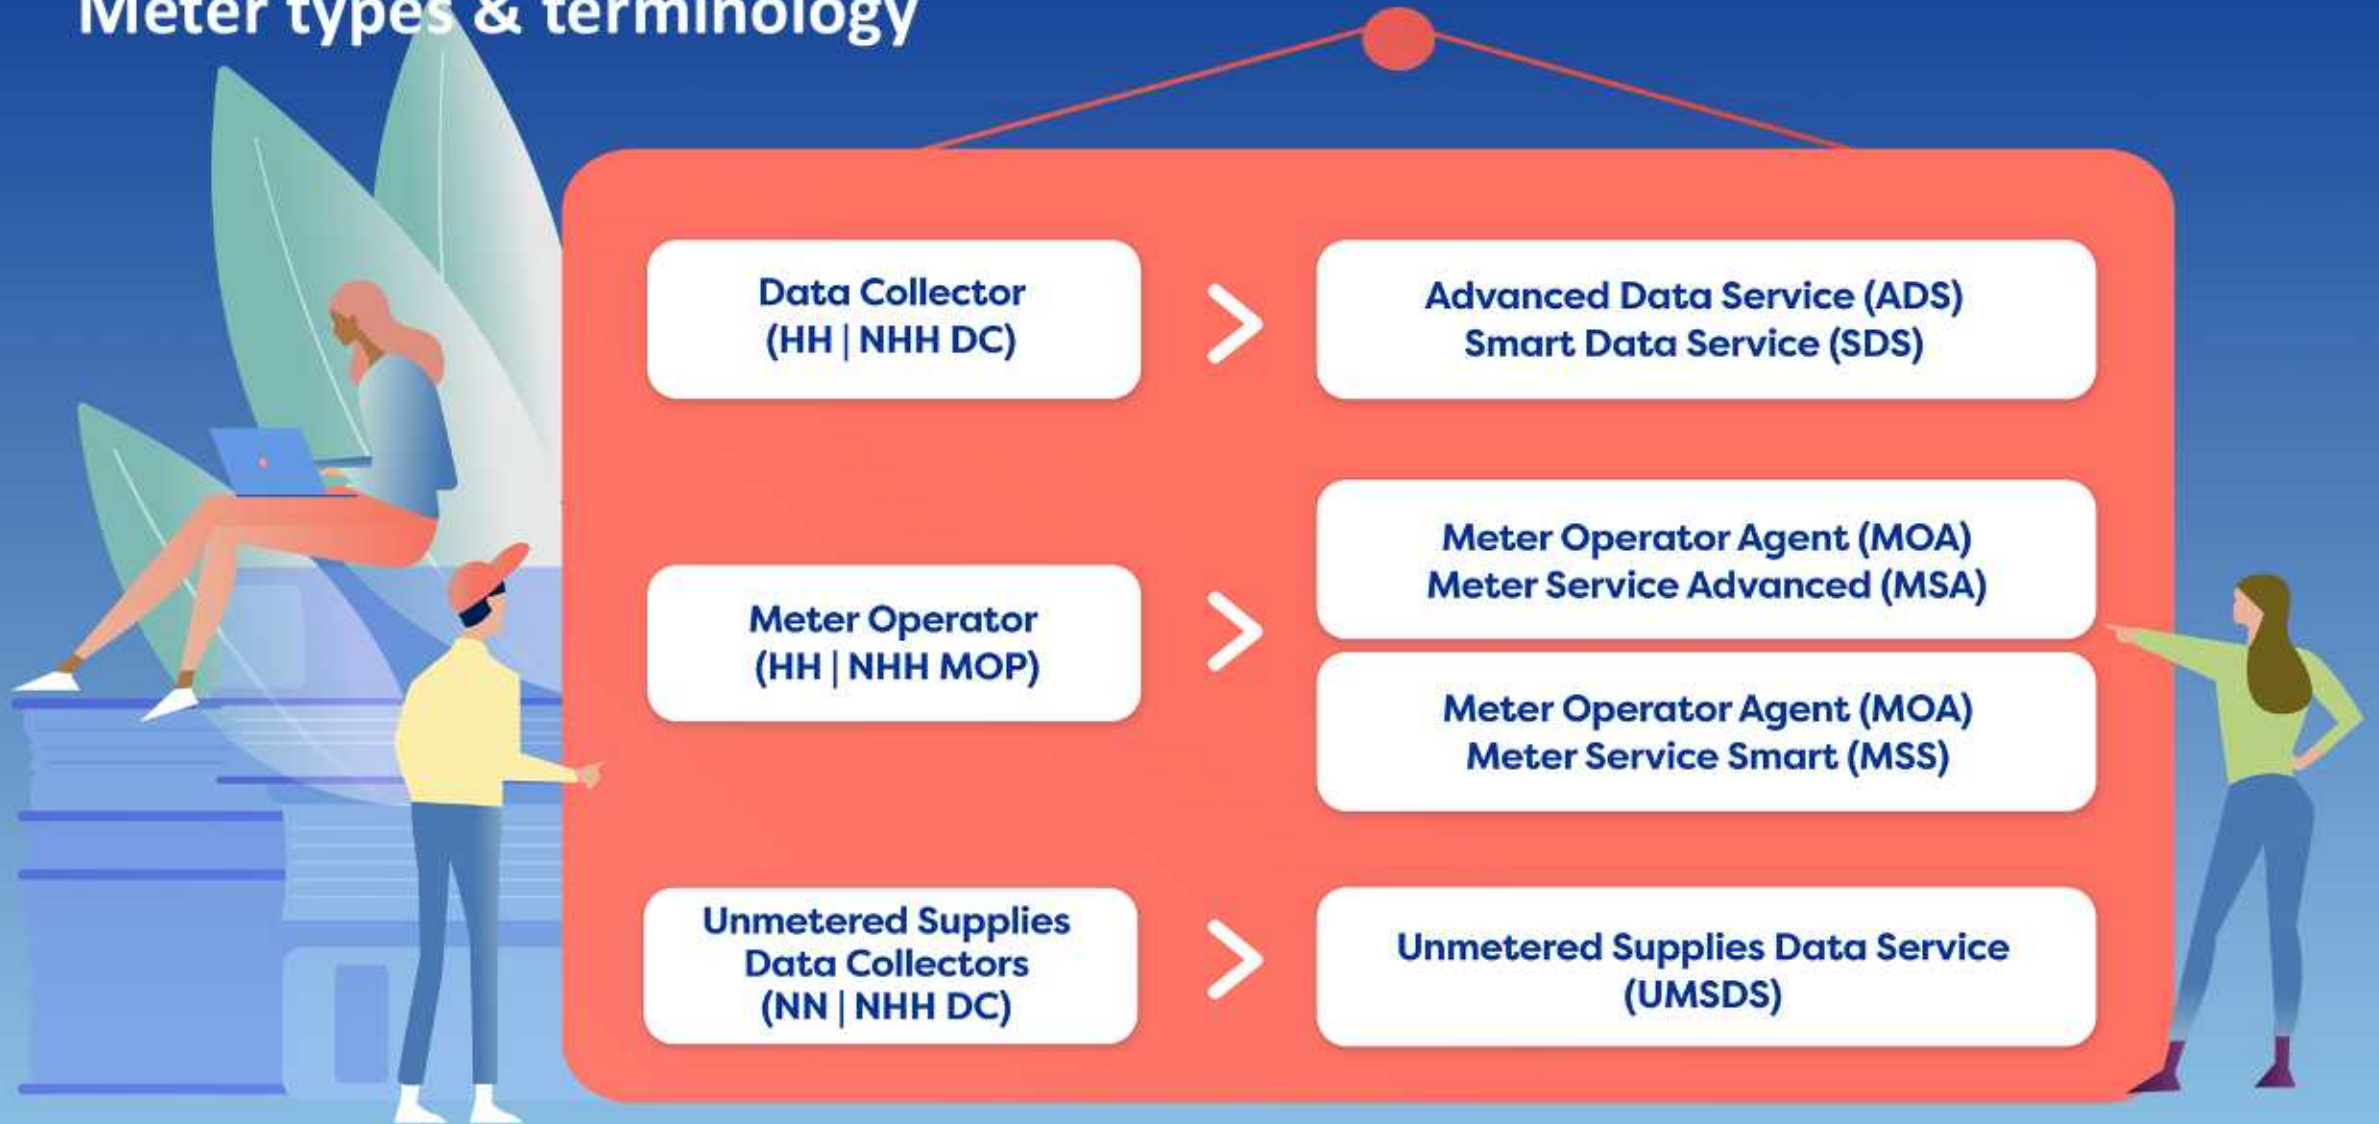

Migration deadline for all 30m meters in UK

2.6m I&C & SME meters
27.4m domestic meters

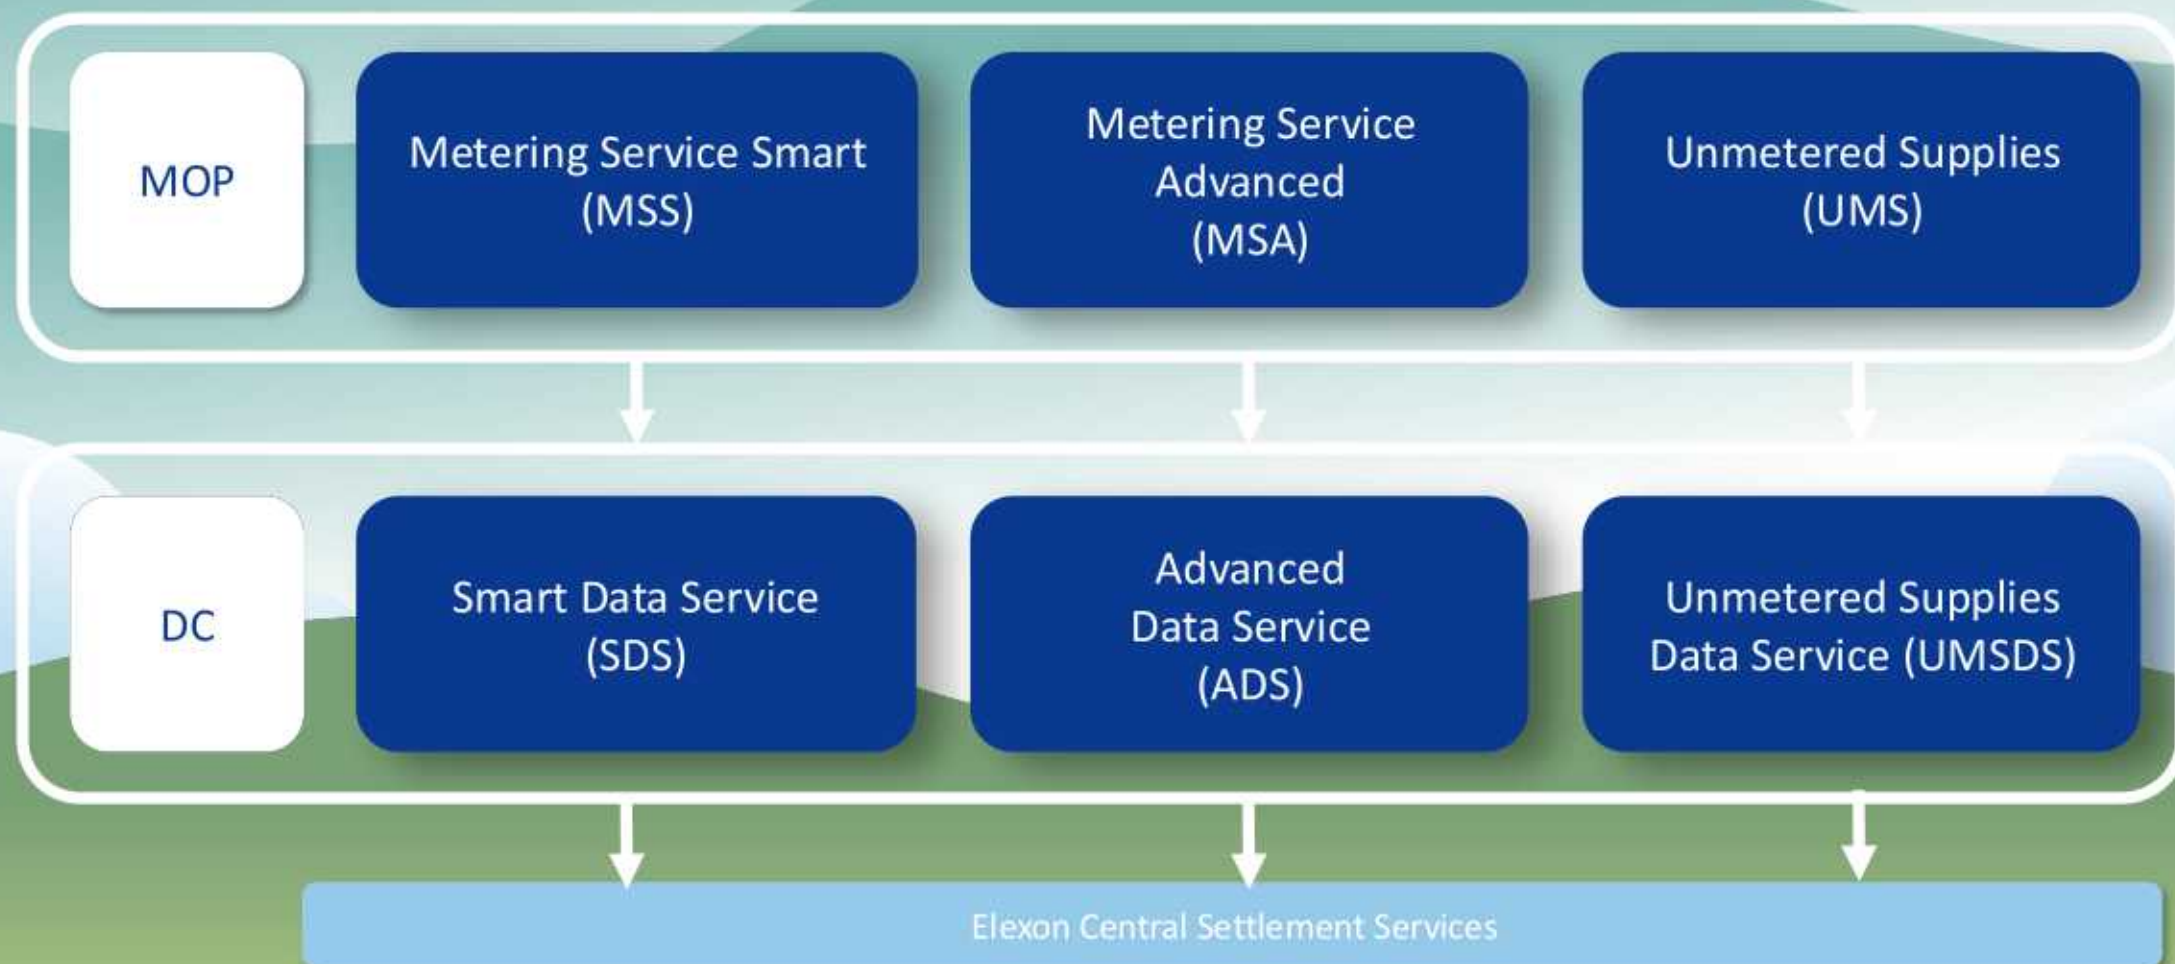

Key changes

Meter types & terminology

Stark will be qualified in all areas

MHHS means more data, faster

A step change in volume & data quality

Today's performance standard

MHHS performance standard

Managing Expectations

Uncertainty & disruption

New terminology
& processes

Changes to existing & new
customer contracts

Multiple MOP & DCs create
delays & more disruption

Changes to billing, new
charges on supplier billing

Reputational risk with subpar
data quality

Net Zero plans impacted by
low quality data

TOU pricing & procurement
need accurate Day+1 data

Changes in pricing to meet
higher HH performance

Less control, quality and
choice through default
service

Partner with Stark

Advanced Data & Metering through Supplier Nomination

- Maintains control
- Protects data quality
- Retains continuity
